50G/63G

Heavy Duty Cutting Horizontal Machining Center

- 2 Step Gear on Main Spindle for Heavy Duty Cutting
- Standard Oil Cooling System for High Precision
- Shuttle Type APC
- Box Guides on All Axes for Ultra Rigidity
- Air Semi-Rising Slideway on Z-axis
- 8-Face Contact Y-axis Guideway
- Specially Designed Columns that Minimizes Thermal Displacement
- Tool Magazine Capacity of up to 120 Tools (Opt.)

01 BASIC STRUCTURE

Revolutionized Productivity & High Performance – Horizontal Machining Center

HIGH RIGIDITY, HIGH PERFORMANCE

HIGH RIGIDITY STRUCTURE

“T” Type Bed

The ‘T’ structure of the bed is designed with ample bed height and casting thickness to ensure the optimal level of rigidity.

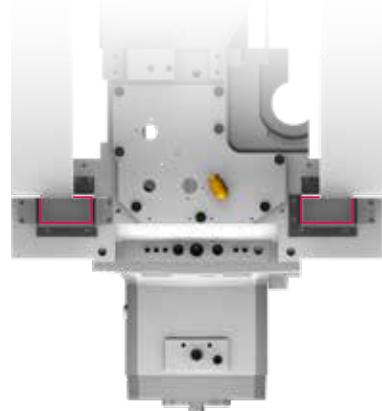

Column Moving Structure

The Z-axis of the machine is designed with a moving column to prevent table sag. The moving column structure increases rigidity and reduces heat generation. Hence, it shows excellent performance in heavy duty cutting where accuracy and repeatability are maintained.

GUIDE WAY

Box Guideway for All Axes

KH50G/63G is designed with box guideways which show great performance in offsetting vibration. Therefore, it is possible to efficiently machine difficult to cut materials into high precision products.

Air Semi-Rising Slide Way

By applying the air semi-rising slideways, the load on the Z-axis slideway is decreased. Therefore, positioning and repeatability accuracy can be maintained for a long time.

8-face Contact Y-axis Guideway

Spindle head contacts 8 faces of Y-axis guideway. This new method allows cutting forces generated by the spindle head to be absorbed by the Y-axis box guideways which improves heavy duty cutting ability, accuracy, and surface finish.

HIGH-PERFORMANCE, HIGH-PRECISION SPINDLE

SPINDLE

High Precision & High Rigidity Spindle

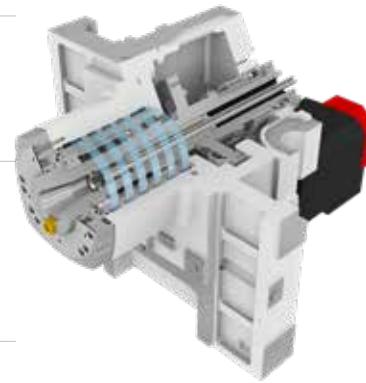

By using ultra precision class cylindrical roller-bearings, fast acceleration and deceleration of the main spindle is achieved. The spindle head is designed to minimize thermal displacement of the main spindle, and with the use of a hydraulic tool lock system the machining stability has been increased.

2-Step Geared Spindle

KH50G/63G is designed with a 2-step gear drive, which provides high torque at low rpm and stability at high rpm.

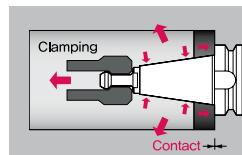

Spindle Cooling

The spindle cooling system minimizes thermal displacement which can happen during lengthy machining operations, and offers continued accuracy based on the thermal stability.

8 Nozzles Directing Coolant

8 nozzles on the spindle improve precision by providing coolant on the machining area where direction of injection can be adjusted.

Dual Contact Spindle

The Big Plus spindle system (BBT50) provides dual contact between the spindle face and the flange face of the tool holder.

- ❖ The increase in standard diameter improves stiffness and ATC repeatability, and Z-axis displacement is prevented which further extends tool life.

THROUGH SPINDLE COOLANT OPTION

Through Spindle Coolant is exceedingly useful when drilling deep holes. It helps increase the lifetime of the tool, while decreasing cycle time.

HIGH RIGIDITY, TOOL & PALLET CHANGE SYSTEM

APC & PALLET

Shuttle Type APC

KH50G/63G is equipped with a shuttle type APC (Automatic Pallet Changer) as standard. The pallet can be rotated in the loading station for quick and easy load/unload of machined parts.

B Axis Index Angle Std. : 1° [Opt. : 0.001°]

Air Clearing System

During the pallet change cycle, strong air blasts from the taper cones on the machine table helps remove chips to provide clean surface for locating the pallet. This ensures high accuracy of pallet positioning and guarantees optimum rigidity.

ATC & MAGAZINE

KH50G/63G offers various tool magazines which expand the range of machining.

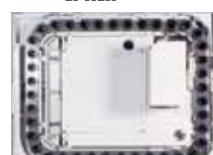

Also, fixed address tool selection method and 2 types of ATC cycles for heavy tools and standard tools increase convenience.

ATC Air Blow & Brush

Tool holders are automatically cleaned by an air blow and brush when they are placed in the standby position.

Various Devices for User Friendly

CHIP DISPOSAL SOLUTION & COOLANT UNIT

Std. Coolant (Nozzle)

Gun Coolant (Opt.)

Air Gun (Opt.)

Spindle Cooling Unit

The cooling unit is installed within the side of the machine to minimize the installation area. The application of the inverter type, $\pm 0.1^\circ$, enables rapid and effective control of the spindle thermal displacement.

Interior Screw Chip Conveyor

Dual screw type chip conveyors are located at each side of the bed which makes it convenient to remove chips.

Chip Conveyor

Timely and effective disposal of chips will improve productivity as well as working environment.

Hinge	Chip Type : Roughing chip, long chip, chip complex Highly efficient when disposing a lot of chips. Capable of handling stringy chips..	Material : SS41, 45C, Cast Steel
Scraper	Chip Type : Finely broken chip blown out Convenient for shortly cut chips.	Material : cast Iron, Nonferrous
❖ Screw	Chip Type : The lower portion of micro-chips Compresses and ejects chips to reduce chip trouble.	Material : Steel, Casting
	Chip Type : Powder, micro chip Advantageous in precision, as the chips do not flow in to the coolant nozzle.	Material : AL
❖ Drum Filter	Left Direction	

❖ When ordering a screw or drum filter chip conveyor, prior consult with hyundai wia's sales person.

Optional

6PPL

6PPL contains 5 buffer stations and a setup station as standard. Compared to conventional machines that feature APC (2 Pallets), 6PPL runs automatically for longer time. Also, machining various products is possible under a scheduled operation.

PRECISION SYSTEM

Linear Scale

Linear scales increase positioning accuracy and reduce distortion caused by thermal growth, thus ensuring a more accurate finished part

TLM (Laser & Touch)

Tool lengths and diameters can be set automatically using the optional tool setter. This can also be used to monitor attrition and detect broken tools.

Touch Sensor

Workpiece coordinate values can be set automatically using the optional spindle probe.

APC Safety Sensor & Control Panel

Safety Sensors on APC covers detect the presence of operators near APC. When a contact is detected on the beam, APC automatically stops. This helps establish a safe work environment.

Also, additional control panel is provided for APC operating.

NC ROTRY TABLE & HYDRAULIC SUPPLY UNIT

Various shapes of products can be processed when using NC Rotary Table. In addition, 100 bar of high pressure hydraulic unit for the fixture increases the tightening power of the teeth.

MMS (Machine Monitoring System)

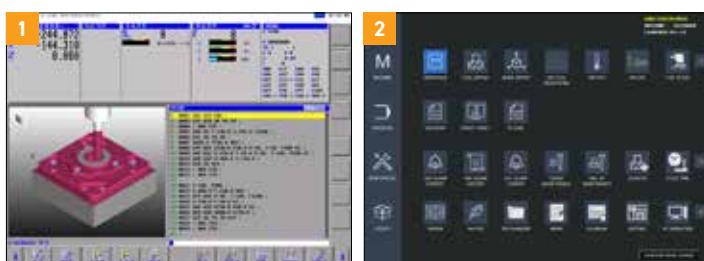

1. MMS Cloud

A cloud server-based equipment monitoring system for collecting and analyzing facility operation data.

2. MMS Edge

A client server-based tool monitoring system for collection/analysis of facility operation data. (Compatible with client MES / ERP interface)

SMART CNC (FANUC SMART PLUS)

1. Dialogue Program (Smart Guide-i)

This software offers the maximum user convenience through dialogue manipulation from setup to processing. This includes writing processing programs and simulation checks.

2. LAUNCHER

This software offers shortcuts for quick access to specialized features and frequently used features.

HYUNDAI WIA ECO SYSTEM

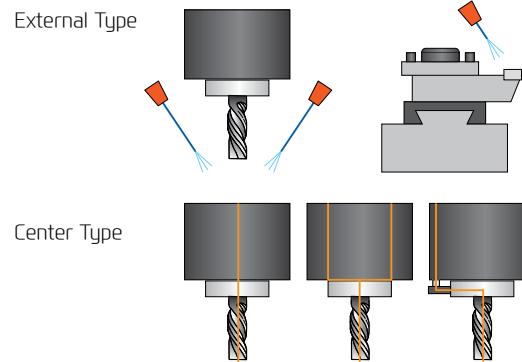

MQL (Minimal Quantity Lubrication)

The goal of this system is to spray only the amount of lubricant required to prevent heat and chip build up at the cutting tool or work piece face.

Example of Machining Center Application

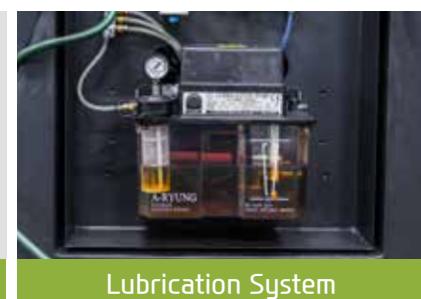

Example of Etc.

Oil Skimmer

Mist Collector

Lubrication System

An oil skimmer can increase coolant and tool life by removing tramp oil contaminants.

Mist Collector reduces the amount of smoke and oil mist in the air. This helps build a safe and comfortable working environment and improve durability.

By applying lubricant only when the machines axis are moving lubrication consumption is reduced by compared to standard systems.

HYUNDAI WIA ENERGY SAVING

HW-ESS (HYUNDAI WIA Energy Saving System)

HYUNDAI WIA Machine tool provides the optimum power saving function that can easily save energy with an intuitive user interface.

1. **Machine-ready power saving function** : Put all servo motors and other motors into sleep mode when no control or operation is done for a set time
2. **Work light auto-off function** : The work light is turned off automatically when no control or operation is done for a set time
3. **Chip conveyor auto power saving** : Operation/non operation time (timer) can be set to save energy
4. **Auto Power-off** : Auto power off after ending the an operation after a period of time
5. **Eco function** : Machine ready sleep mode can be activated/de-activated from the controller panel
6. **Power consumption monitor** : Real time power consumption can be monitored through the OP screen
