REDUCTION OF NON-CUTTING TIME BY FAST RAPID SPEED

COMPACT DESIGN

Column Moving Type

In order to utilize the dual table, column moving structure is adopted.

Also, extended column width and symmetrical heat behavior column structure allows accurate processing and minimized thermal displacement.

Dual Table Type Tapping Center

High productivity is achieved by the dual table which enables workers to setup a new workpiece while the machine is processing. Especially, the rotary table is designed for the simpler positioning by the location pin due to the application of hydraulic methods.

SLIDEWAY

LM Guideway

High speed axis movement is achieved by the use of LM guideways. This reduces non-cutting time and decreases machining time for greater productivity.

(Z-Axis : Roller LM Guide)

Ball Screw

The double anchored and pretensioned design provides outstanding positioning and repeatability with minimal thermal growth. Ball screws are connected directly to the servo motor to eliminate backlash.

HIGH-PERFORMANCE, DIRECT DRIVEN SPINDLE

SPINDLE

Direct Spindle

The spindle is designed with angular contact ball bearings to increase rigidity, prevent thermal displacement. Due to the maximum spindle speed of 24,000rpm (i-CUT4000/4500), various types of machining is possible. While in reverse rotation, Double Speed Return function reduces processing time.

Spindle Air Purge Application

The main shaft motor cover prevents coolant from flowing into the head. In addition, by designing the spindle air purge through the spindle, the ability to remove chips from the spindle is improved.

Spindle Thru Coolant **OPTION** (20/30/70 bar) >

Dual Contact Spindle

The Big Plus spindle system (BBT #30) provides dual contact between the spindle face and the flange face of the tool holder. This greatly increases tool rigidity, reduces run out and adds significant productivity to machining applications.

HYUNDAI WIA ECO SYSTEM

MQL (Minimal Quantity Lubrication)

The goal of this system is to spray only the amount of lubricant required to prevent heat and chip build up at the cutting tool or work piece face.

Example of Machining Center Application

Example of Etc.

Oil Skimmer

An oil skimmer can increase coolant and tool life by removing tramp oil contaminants.

Mist Collector

Mist Collector reduces the amount of smoke and oil mist in the air. This helps build a safe and comfortable working environment and improve durability.

Lubrication System

By applying lubricant only when the machines axis are moving lubrication consumption is reduced by compared to standard systems.

HYUNDAI WIA ENERGY SAVING

HW-ESS (HYUNDAI WIA Energy Saving System)

HYUNDAI WIA Machine tool provides the optimum power saving function that can easily save energy with an intuitive user interface.

1. **Machine-ready power saving function** : Put all servo motors and other motors into sleep mode when no control or operation is done for a set time
2. **Work light auto-off function** : The work light is turned off automatically when no control or operation is done for a set time
3. **Chip conveyor auto power saving** : Operation/non operation time (timer) can be set to save energy
4. **Auto Power-off** : Auto power off after ending the an operation after a period of time
5. **Eco function** : Machine ready sleep mode can be activated/de-activated from the controller panel
6. **Power consumption monitor** : Real time power consumption can be monitored through the OP screen
